## My professional philosophy is simple:

I'm here to break paradigms.

I am a disruptive and self-taught thinker, focused on problem-solving from "first principles." I don't just follow rules; I seek to understand them in order to innovate. Where most see logic, I look for alternatives; where they see chaos, I find patterns. This methodology allows me to transform complex challenges ("nightmares") into functional, elegant, and exponentially more effective solutions ("beautiful dreams"). I am here to break paradigms and build new realities. From complex problems to creative blocks, I transform them into "beautiful dreams" (elegant and functional solutions).

## Skills

### Leadership and Management

- Adaptability and multifunctional role.
- Creative solutions to complex problems.
- Process optimization.
- Staff training and development.
- Production management and supervision.

### Digital and Creative

- Prompts Engineering.
- Logistics Software Management (Scpack).
- Product Innovation and Development.
- Web Design and Digital Marketing.

### Techniques

- Industrial manufacturing and assembly.
- Welding (arc, autogenous, argon).
- Preventive and corrective maintenance.
- Interpretation of plans and sketches.

## Work Experience

EK Logistics, private. (December 2023-November 2024)

Delivery driver and driver trainer. My responsibilities included:

- Training and supporting new staff (drivers and assistants) in daily operations.
- Instruction in work methods, including route optimization, stacking, and customer service protocols.
- Expert handling and instruction in the Scpack (Mercado Libre) logistics platform for managing deliveries and pickups.
- On-road team leadership, providing support and troubleshooting to other drivers during pickups.
- Fleet supervision: daily inspection of units and monitoring loads and fuel efficiency.

Astro Refrigeration (January 2019 - November 2023)

General Coordinator of Production and Development.

My responsibilities included:

- Comprehensive management of the commercial refrigeration production cycle (display cases, cold rooms, special designs), from sketching and paper layout to commissioning with the client. Specialized technical manufacturing, mastering cutting, sheet metal layout, and welding processes (electric arc, oxyacetylene, and argon). Production and assembly leadership, including the manufacturing of condensing units and the implementation of improvements in assembly processes. A key multifunctional role in the company's growth, encompassing everything from preventive/corrective maintenance and logistics (driver) to web design and marketing. Innovation and development of new furniture designs, optimizing product functionality and aesthetics.

## What do I offer your team?

Disruptive Thinking: A unique perspective to create prompts that generate phenomenally creative results and solutions others miss. Attitude Over Aptitude: I seek an inclusive and courageous work environment that understands that while skills are learned, an innovative attitude is innate. Demonstrable Commitment: I am currently focused on acquiring formal certifications to complement the practical experience I already possess. My proposal is honest, fresh, and transparent: I'm not asking for blind trust, I'm asking for an opportunity to prove my worth. Consider my collaboration as a pilot project. Give me a test. Allow me to apply my approach to one of your current challenges. "If you're looking for someone with

"pre-made" ideas, I won't be the ideal candidate. On the other hand, if you have faith in this pilot, I trust that my ability to generate different results, combined with your confidence, has the potential not only to expand your universe, but to create new ones."

## Education:

Self-taught training.
